

Barrier free

drainage solutions

ACO Sanitary Drainage

ACO offers various sanitary drainage systems.

There is a wide range from ACO ShowerDrain channels, sanitary gullies to flush-floor systems. New in our selection is the revolutionary ShowerFloor system and the new communal shower channel ACO ShowerDrain Public. The product programme is enhanced due to ACO ShowerStep, which incorporates a gradient together with a professional finish. ACO has the right solution for every requirement, from high-quality commercial wetrooms, sports facilities to private bathrooms.

ACO. creating

the future of drainage

The worldwide ACO Group. A strong family you can build on.

The ACO Group is a world market leader in drainage technology. Climate change sets us a challenge to react effectively with innovative solutions to new environmental conditions. With its integrated approach, ACO stands for professional drainage, efficient cleaning, and the controlled discharge or reuse of water. Products include drainage channels and drains, oil and grease separators, backflow stop systems, pumps and pressure-water-tight cellar windows and light shafts.

The family-owned company headquartered in Rendsburg/Büdelndorf, Germany, was founded in 1946 on the site of the Carlshütte foundry – Schleswig-Holstein's first industrial company. It still has very strong roots in the region. The innovation strength of the ACO Group is built on intense research and development, and its technical expertise in processing polymer concrete, plastic, cast iron, stainless steel and reinforced concrete.

ACO ShowerDrain

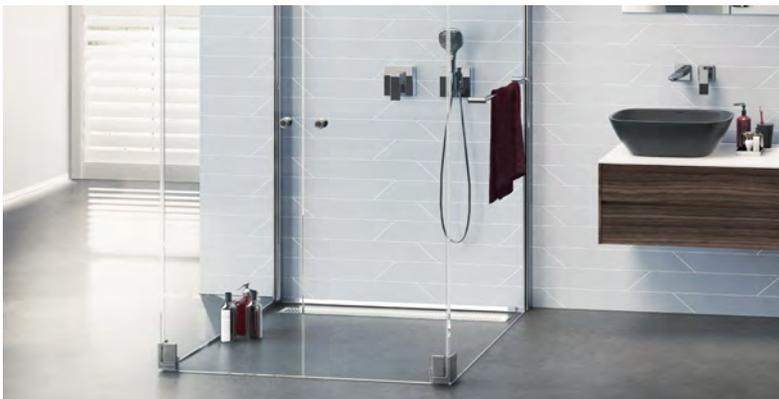

Products for each requirement

Hotel, wellness and spa

ACO ShowerDrain Public optimizes the creation of generously sized, uniform bathrooms, designed without any interruptions, changes in material or barriers.

- Premium products with short delivery time
- Flexibility in design
- Maximum safety, load class K3 and easy to clean

Residential and public buildings

Due to the variety of ACO ShowerDrains, ACO has solutions for virtually all structural challenges required. From fire protection and various installation heights to a channel with a vertical socket.

- Fire protection
- Various installation heights
- Modular systems

Health and care

To improve hygiene together with a superior finish, ACO offers electro polished channels and gratings.

- Guarantees maximum safety and hygiene
- Quick and easy cleaning
- Low maintenance requirements

Barrier-free design

ACO ShowerDrain - a design statement. Whether on the wall, in the centre of the shower or with individually engraved gratings. Let your imagination run wild.

- Variety of design options
- Safe and easy to install
- Easy handling

Hygiene benefits and durability

Manufactured to an extremely high standard, ACO's range of channels and gratings is perfect in relation to hygiene, operational safety and durability regarding product life.

- High-alloy stainless steel
- Completely pre-assembled or modular systems
- Plane welding seams for easy cleaning

Design

There is a wide range of styles to choose from, so you never need to compromise performance for design. For added piece of mind, customers also get access to our sales team who provide expert advice to specifiers and installers, and when required, support your design of ACO ShowerDrain E+ and the communal ShowerDrain Public from scratch.

- Customized solution available
- High drain performance due to additional gullies
- Drainage solutions from scratch

ACO ShowerDrain C

Powerful, robust, easy to clean!

ACO ShowerDrain has become a synonym for floor-level designer shower channels. Many times honoured with design awards, they have been part of an established element of barrier-free bathrooms. Made of stainless steel, they combine functional and aesthetic advantages: The hardness of the material reduces scratch and wear marks and is resistant to common cleaning products. The high-quality appearance of the glossy surface is convincing with low dirt adhesion and easy to clean.

ACO ShowerDrain C

- Minimum installation height: 69 mm
- Meets requirements of all sound protection levels (SSt I-III in acc. with VDI 4100)
- Free access to the pipeline for optimal cleaning
- Factory-welded hydro-shaped gully, guarantees permanent tightness
- Removable foul air trap for optimal cleaning
- High drainage capacity

An established element

of barrier-free bathrooms

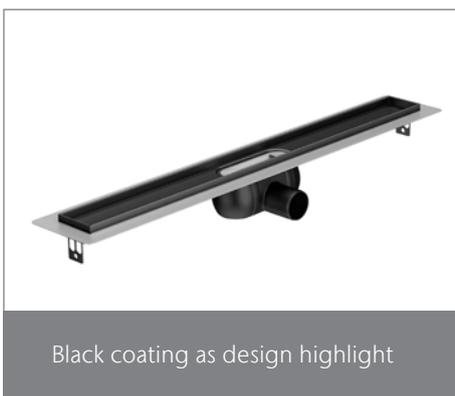

The special characteristics of the new ACO ShowerDrain C are the hydroformed gully and the new two-part foul air trap

The new production process of the gully, also known as hydroforming, enables pipe forming into complex three-dimensional shapes.

The advantage of the process: the channel achieves a very high drainage capacity despite its low installation height and narrow shape, which guarantees permanent tightness. The new foul air trap has two outer tabs that allow it to be removed without having to reach into the trap, thus ensuring more hygienic cleaning. Other highlights of the new ACO ShowerDrain C are its minimum installation height of 69 mm to the top edge, compliance with all sound insulation levels (SSt I-III in accordance with VDI 4100), a version with factory-fitted sealing collar (W3-I compliant in accordance with DIN 18534) and free access to the pipe.

As a further design highlight, the ACO ShowerDrain C is also available with black coating.

ACO ShowerDrain E+

Installing is now even easier!

Barrier-free bathrooms are always in demand. ACO Building Drainage provides new, easy to assemble as well as clever solutions for these areas with ShowerDrain E+. The result: a significantly more simplified installation process for you. Convincing design in every detail for the client. We also place a lot of importance on absolute reliability at ACO Building Drainage.

We offer a complete product range with which we can contribute to ensure that you, as an installer, always have the right system.

Ceramic floor coverings? Or natural stone? One can decide directly on the construction site for how the tiling should look after installation of the shower channel. Also typical for ShowerDrain E+: You can decide on site whether the waterproofing should be executed with or without diffusion openings. This therefore makes your work easier and means that the channel is the right solution for new construction and refurbishing. ShowerDrain E+ is your choice of safety. It fulfills all requirements, not only according to DIN EN 1253-1 but also the highest water class W3-I according to DIN 18534. This therefore makes it suitable for applications in private and public areas.

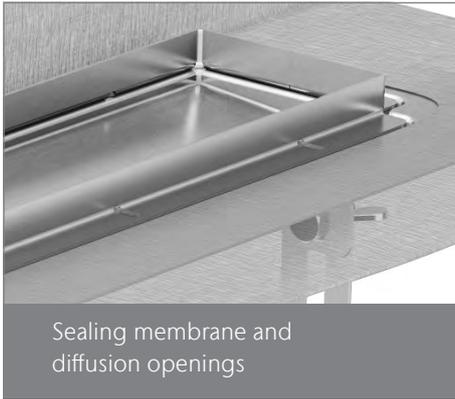

ACO ShowerDrain E+

- Option for secondary drainage
- Factory assembled sealing membrane
- Fulfills all sound insulation levels (SSt I-III to VDI 4100)
- Superior finish due to electro-polished channel and grating
- Barrier free access to pipeline due to removable foul air trap
- Gully is welded to channel body
- Easy to handle and easy to clean

Installing? Simple!

Waterproofing? Guaranteed!

Sealing membrane and diffusion openings

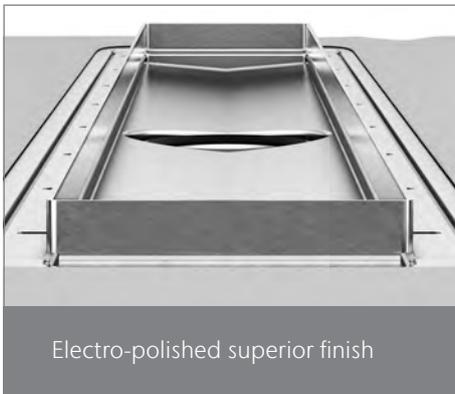

The factory-assembled sealing membrane ensures reliable compound sealing. The shower channels thereby fulfill the requirements of the highest water impact class W3-I, in accordance with the new standard for indoor waterproofing in Germany (DIN 18534-3). Due to the elastic material, a high level of safety is guaranteed when cracks bridging between the shower channel and the settling screed. The integrated, optional secondary drainage system also permits rapid drying of natural stone floor coverings through the diffusion openings. If required, these can be closed during waterproofing process. (See also figure on page 10).

Completely pre-assembled and guaranteed leakproof

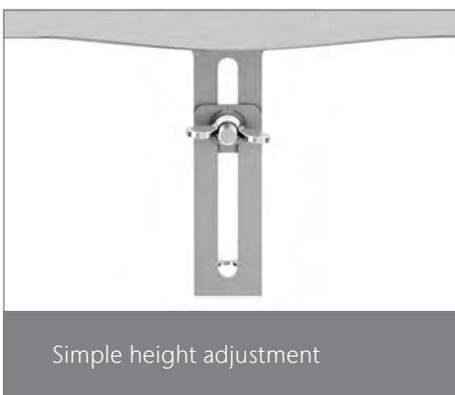

The socket is arranged laterally and thereby guarantees sufficient screed coverage for the pipe. Special solutions and a vertical version are additionally available.

The ACO ShowerDrain E+ is supplied as completely pre-assembled. A complicated assembly is therefore not necessary. The stainless steel drain body is welded tightly to the channel body at the factory.

Electro-polished superior finish

The installation advantages are complemented by the high-quality and timeless aesthetics of the electro-polished surface. The integrated tile frame supports the processing of the tile covering and ensures an even tile finish. Round shapes and flat surfaces ensure both a harmonious design and easy cleaning. The surface is also particularly resistant to cleaning agents. The odour trap allows free pipe access and thus easy cleaning.

Simple height adjustment

The channel can be suitably, and simply, adjusted to the floor level by utilising the two adjusting screws.

ACO ShowerDrain M+

Everything is made simple by just turning!

The ACO ShowerDrain M+ is equipped with 360° rotatable gully body. You can also select between four gullies to suit the installation situation, providing great flexibility and easy installation right from the start.

The ACO ShowerDrain M+ can be adapted to installation heights of up to 56 mm. Round shapes and flat surfaces ensure both a harmonious design and easy cleaning. The surface is also particularly resistant to cleaning agents. The odour trap allows free pipe access and thus easy cleaning.

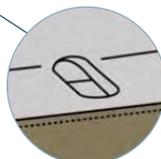

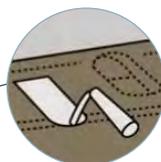

ACO ShowerDrain M+

- Minimum installation height: 56 mm with inclination 1.5°
- Option for secondary drainage
- Factory assembled sealing membrane
- Fulfills all sound insulation levels (SSt I-III to VDI 4100)
- Superior finish due to electro-polished channels and gratings
- Flexible for any installation situation
- Gully body can be rotated through 360°

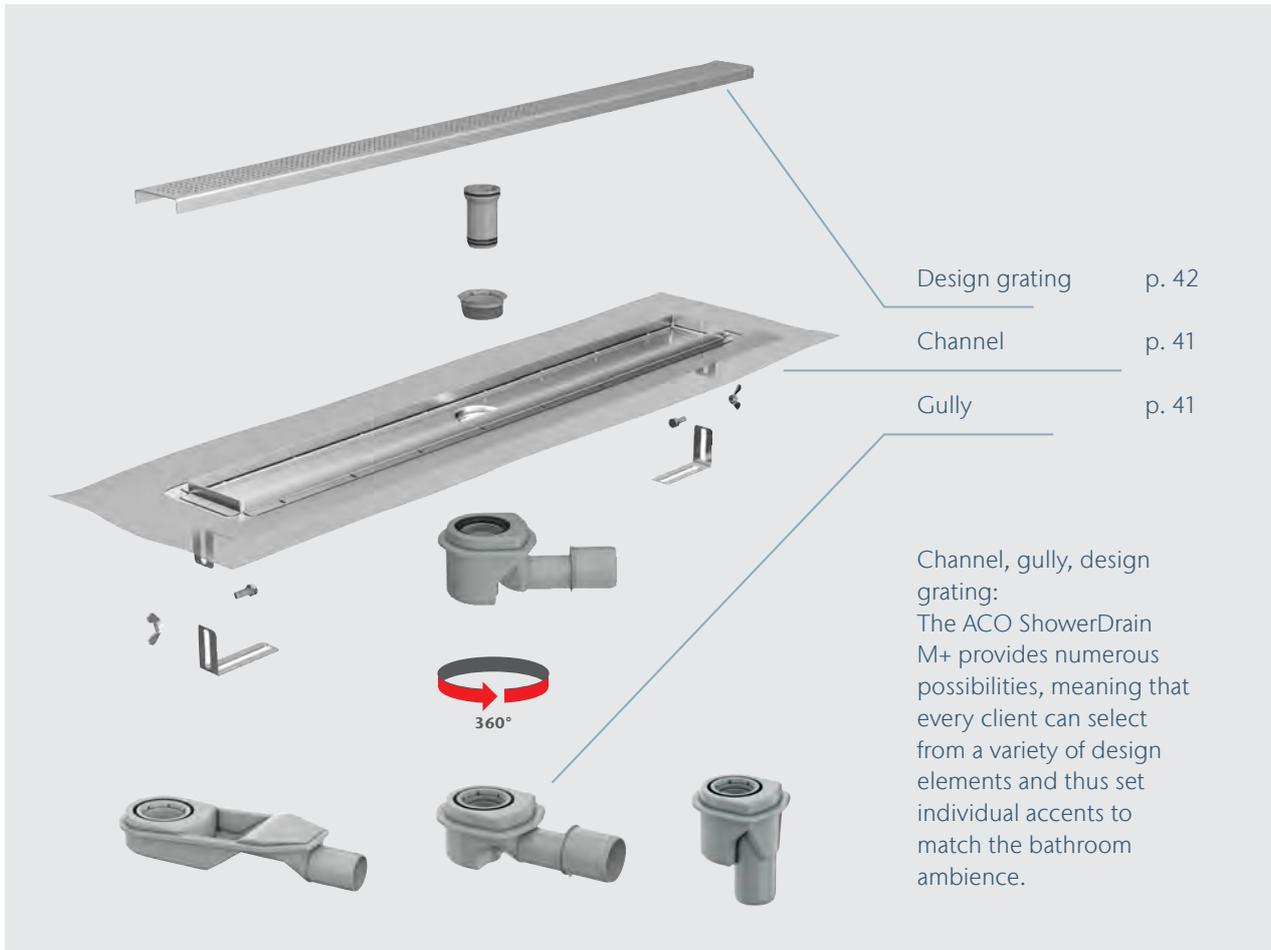

Enormous flexibility

for every installation situation!

- 1 Factory assembled sealing membrane
- 2 Rotatable outlet
- 3 Openings for seepage water
- 4 Sealed openings for secondary drainage

Modular system for every requirement

◀ The challenge of installation heights comes up again and again, not only in renovation. ACO ShowerDrain M+ offers flexible solutions: Installation heights of 56 - 140 mm UFL (unfinished floor level) can be realized. Due to the choice of 4 drain bodies, the installation height can vary by 84 mm, which eases installation significantly.

▲ During installation and beyond the period of usage, a permanently tight connection of all components is very important. Therefore, all gully bodies are equipped with a permanently injected seal. This ensures that the seal is not accidentally lost or can slip during installation.

◀ The ACO ShowerDrain M+ can be combined with four different gully bodies to make it suitable for the installation situation. The gully body of the ACO ShowerDrain M+ can be flexibly aligned according to the course of the drainage pipe. Screwed in the middle, the gully body is therefore a secure, force-locked connection that holds the gully securely in position after installation.

ACO ShowerFloor

Stop the tinkering!

Whoever builds or renovates today rarely chooses a conventional shower tray with a high rim for the shower area. With the current technical solutions - shower tray, shower channel or shower board - the advantages of one are the disadvantages of the other. With the floor-level shower

system ACO ShowerFloor, a solution is available that combines advantages and eliminates the disadvantages: The first support system for fully tiled shower areas can be flexibly adapted to the special conditions.

ACO ShowerFloor

- Meets requirements of all sound protection levels (SSt I-III in acc. with VDI 4100)
- Tileable directly after installation
- Time for a change of crafts and screed drying is saved
- Flexible adaptation to the cutout
- Simple and quick height adjustment from above
- Shower board with integrated gradient

Safe planning and
easy installation

Point drainage

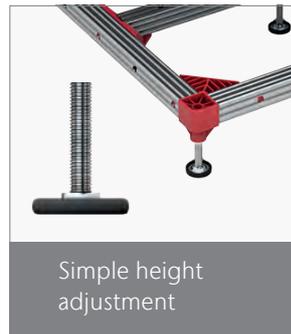

Line drainage

Flexible choice of gully bodies

You can combine the ACO ShowerFloor with different gullies to suit the installation situation. Depending on the required installation height, a horizontal or vertical drain body is available.

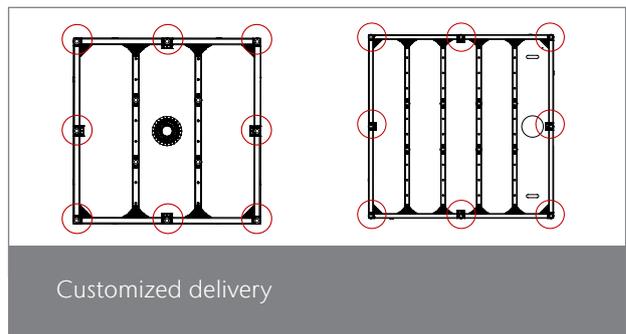

Simple height adjustment

With the help of adjustable feet, the height of the ACO ShowerFloor can be adjusted simply by turning the feet in or out. The construction of the foot also ensures that unevenness in the floor is compensated for, thus enabling a stable stand.

Fast fixation in the cutout

Possible up to 20 mm adjustment range per side. The ACO ShowerFloor is fixed in the cut-out using mechanically adjustable spacers. A readjustment is also easily possible by means of threaded inserts.

Customized delivery

The floor-level shower system ACO ShowerFloor is already pre-assembled at the factory and can be supplied with a perfect fit on request. This ensures quick installation on the construction site.

 No warping of the drainage pipe in these areas!

ACO ShowerDrain Public

Setting individual accents

Channel, gully, design grating: The ACO ShowerDrain Public provides numerous possibilities, meaning that every client can select from a variety of design elements and thus set individual accents to match the bathroom ambience. Manufactured in first-class quality, the ShowerDrain Public sets new standards for quick and safe installation and meets even the highest demands in terms of design and maintenance. In addition to the tool-free height adjustment, the easy-to-install channel includes a factory-assembled sealing membrane and thus complies with the highest water impact class W3-I, according to the new standard for indoor waterproofing in Germany (DIN 18534-3). Using an elastic material, the sealing membrane guarantees a high level of safety. The benefit of this elasticity is

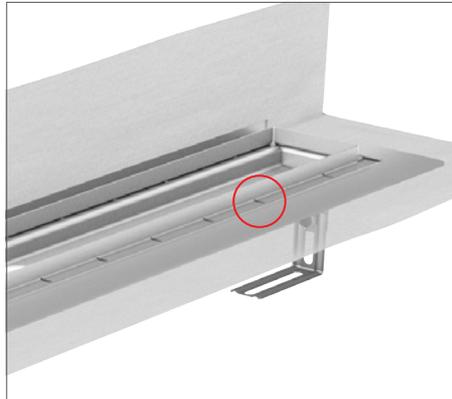

the crack-bridging ability, needed between the shower channel and the setting screed. In addition, the tight connection between the drain body and gully permanently protects the floor structure from water. Using Public 80, the drain body can be rotated through 360° and offers maximum flexibility. Using Public 110, all drain bodies meet the current fire protection requirements according to German standards. The integrated, optional secondary drainage system also permits rapid drying of natural stone coverings due to diffusion openings. With ACO ShowerDrain public you never need to compromise performance for design, there are electro polished gratings, tilable gratings and roll-up gratings available.

ACO ShowerDrain Public at a glance

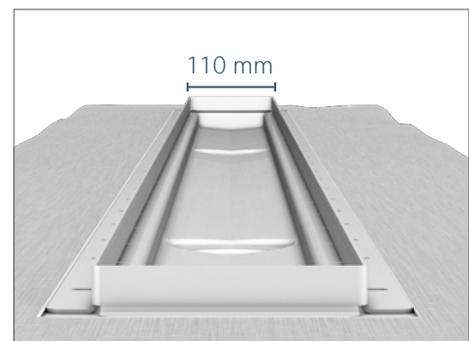

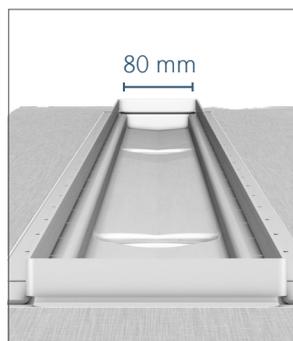

Sealing membrane and seepage water

The factory assembled sealing membrane ensures reliable compound sealing complying with the highest water impact class W3-I, according to the new standard for indoor waterproofing in Germany (DIN 18534-3). The integrated, optional secondary drainage system also permits rapid drying of natural stone coverings due to diffusion openings. If required, these can be closed during waterproofing process. (See picture page 2)

High grade finish, easy to clean surface

High-quality appearance without disturbing corners and edges makes the shower channel easy to clean. The surface is also particularly resistant to cleaning agents. The removable foul air trap allows free pipe access and thus easy cleaning, too.

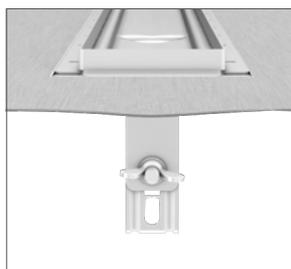

Flexible selection of channel gullies

The ACO ShowerDrain Public can be combined with different gullies to suit the installation situation. Depending on the required drainage capacity, fire protection or sound insulation requirements as well as low installation heights, various gullies made of stainless steel, cast iron or plastic are available.

Easy height adjustment

You can easily adapt the channel to the respective floor level with the help of adjusting screws/quick-release fasteners.

ACO ShowerStep

Gradient compensation between shower channel and bathroom area

The ACO ShowerStep from the ACO ShowerDrain product range is intended to be installed between a walk-in floor level shower area with a built-in shower channel, and the adjoining bathroom area. The bathroom is fully tiled and levelled, without a gradient, while the shower area is tiled with a single-sided gradient of ca. 2 % towards the shower channel. This gradient creates a difference in height between the two areas which increases towards the channel.

ACO ShowerStep provides an attractive transition between the two areas and offers a clean surface profile. It is easy to install, which saves time and it protects the edges of the surrounding surfaces.

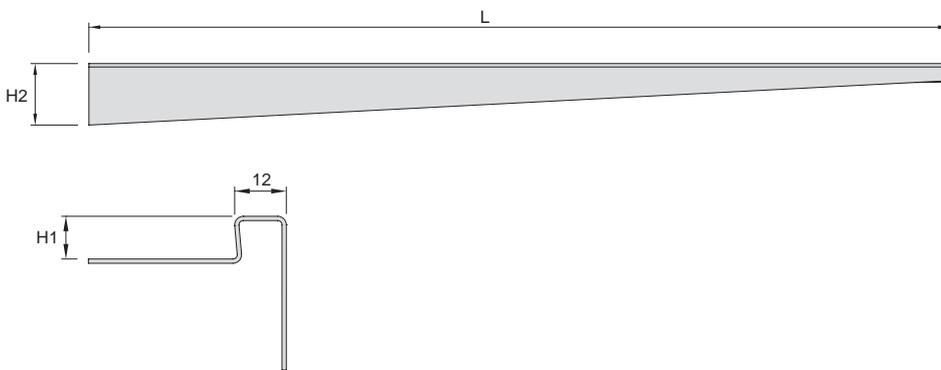

ACO ShowerStep

- Easy to fit
- A product for use with or without glass shower panel
- No tedious and unsightly tile cutting
- Pre-formed gradients
- Can be shortened to any length

Dimensions and versions

ACO ShowerStep is available in 3 lengths (900 mm, 1,490 mm and 1,990 mm) and three heights (H1: 10 mm, 12.5 mm, 15 mm). The specified heights are based on the different tile thicknesses available on the market. The height describes the side of the ACO ShowerStep that faces the level bathroom area and away from the shower area. The lengths can be individually shortened on site. ACO ShowerStep is available in a right and left version.

Surface

ACO ShowerStep is made of stainless steel, material grade 304 and is available in two surface finishes.

■ Grinded

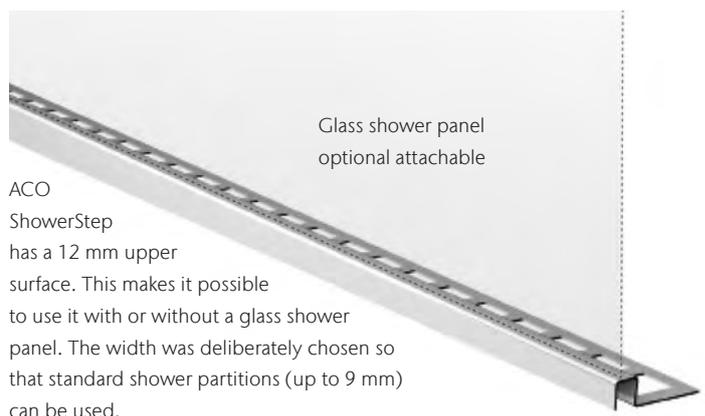

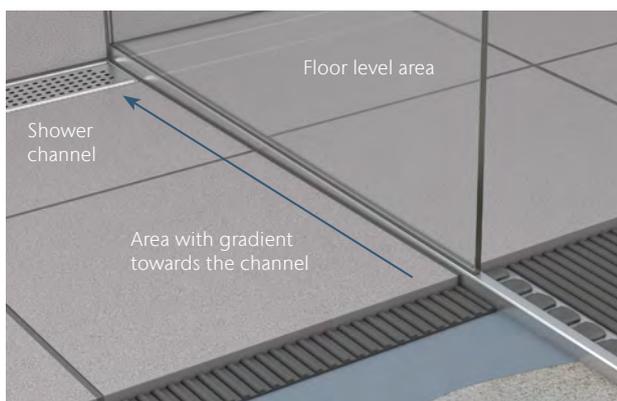

Ideal complement for ACO ShowerDrain C

■ Electro polished

Ideal accessory for ACO ShowerDrain, E+, M+, S and Public

Installation

Apply the adhesive to the screed and also coat the underside of ACO ShowerStep with it. The cavity of the slope wedge must also be completely filled with tile adhesive. Then press ACO ShowerStep into the fresh adhesive, align it and then also coat the top side with sufficient tile adhesive. Now lay the tiles and press them in firmly. The upper edge of the gradient wedge must be flush with the tile. Form a joint (approx. 1-1.5 mm) between tile and wedge and fill it with grout or an expandable compound. After the sloping shower area in front of the shower channel has also been tiled out, the silicone sealant of the shower channel has to be injected.

2

Technical

Information

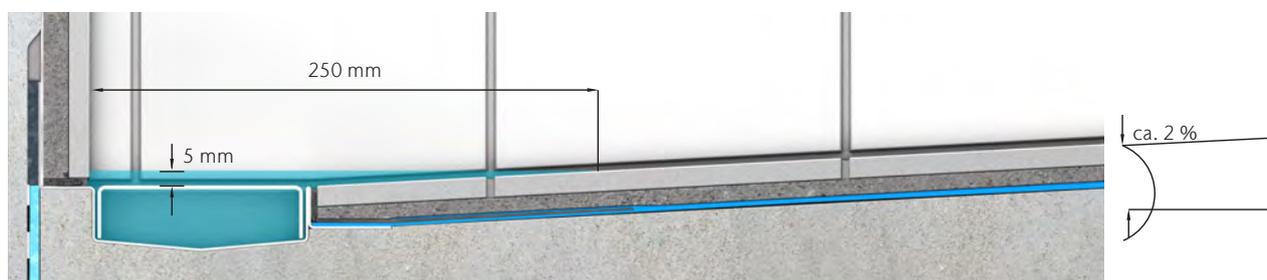

ACO Sanitary drainage

ACO offers various sanitary drainage systems, a range from ACO ShowerDrain channels to sanitary gullies. New in our selection is the revolutionary ShowerFloor system and the new public shower channel ACO ShowerDrain Public. The product programme is enhanced due to ACO ShowerStep, which incorporates a gradient together with a professional finish. ACO has the right solution for each requirement, from high-quality commercial wetrooms, hotels, spa, sports facilities to private bathrooms.

Gradient and drainage capacity

Conventional point gullies require a four-sided gradient in the tiling. By comparison line drainage enables a one-sided gradient. This makes use of large-format tiles significantly easier. A large gradient supports the drainage performance. A small gradient offers more slip resistance and is more wheelchair compatible. In practice gradients between 1.5 % and 2 % have proven successful. If 5 mm water backflow above the grating results during showering, the water is then approx. 250 mm in the room. EN 1253-1 defines flow values for floor gullies and channels with foul

air trap. Accordingly, a minimum value of 0.4 l/s is required for a shower area. This measured value must be achieved with a backflow of 20 mm above the grating. If no standing water is wanted during showering, for example, if the gully is located in the room, the flow capacity of the shower fitting must be noted. ACO ShowerDrain E+ and C offer the additional option of increasing the drainage rate by installing several gullies within a shower channel as a customized solution.

Water seal when mounting the shower channel on the wall

Increased drain performance by using multiple gullies with ACO ShowerDrain E+

Water seal	10 mm	20 mm
Flow rate [l/s]		
1 gully	0,4	0,6
2 gullies	0,7	1,0
3 gullies	1,0	1,4

Increased drain performance by using multiple gullies** ACO ShowerDrain C, M+, Public 80

Water seal		10 mm	20 mm
Flow rate [l/s]

	90	1,0	2,0

The material stainless steel in shower areas

There are several good reasons for using stainless steel in sanitary engineering applications. Thanks to its smooth, hard surface, it does not need any protective layers made from either organic or inorganic materials. Stainless steel is also able to tolerate cleaning and disinfecting agents, even at high temperatures. The material does not become statically charged, a property that stops it from attracting dust particles and, as a result, bacteria. After coming into contact with hot water, its surface dries more quickly than other materials (particularly non-metal ones).

As such, there is no need to rub it dry – something that should be avoided anyway because of the risk of secondary infection it is known to carry. All ACO shower channels are fully preinstalled, which means that all the individual components are firmly connected. This guarantees that the shower channel is completely watertight. The ShowerDrain E+ product range also features a surface that has been electro-polished: in this process, any surface irregularities are removed by a passivating process to the point where a highly reflective surface is produced.

Sound protection solutions for line drainage

Installation proposal ACO ShowerDrain E+ (floor construction according sound insulation test report)

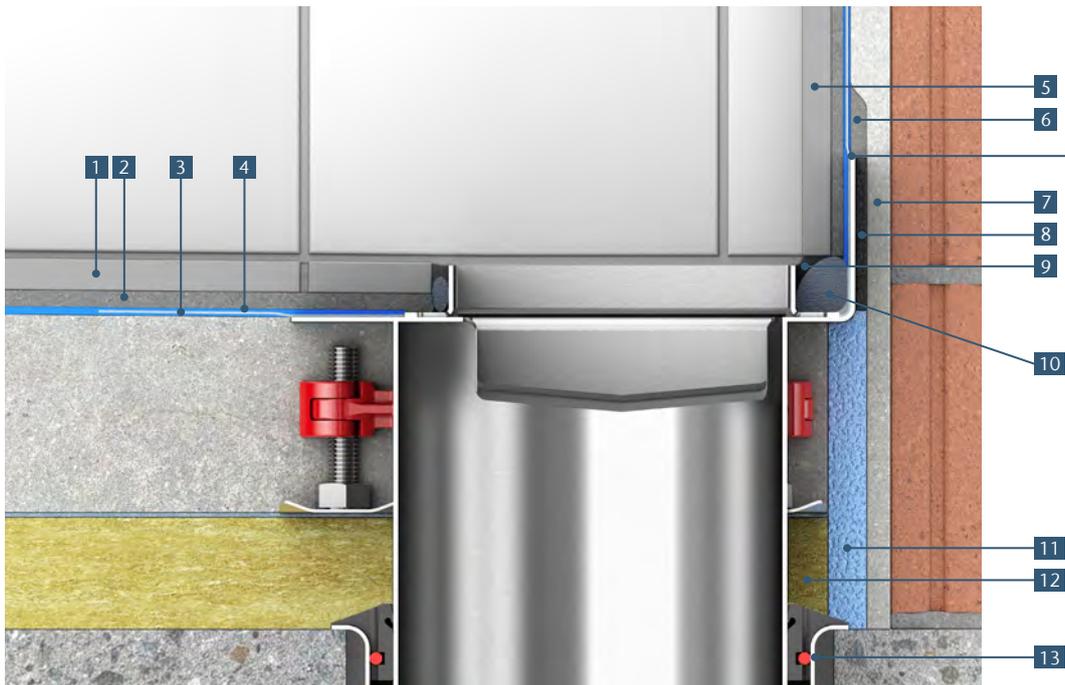

- | | |
|---|---|
| <ul style="list-style-type: none"> 1 Floor tile 2 Tile adhesive 3 Compound sealing (on site) 4 Sealing membrane (factory assembled) 5 Wall tile 6 Offset on site 7 Interior wall plaster | <ul style="list-style-type: none"> 8 Sound decoupling layer 9 mech./elec. connection joint 10 Filling hose 11 Perimeter isolation strip 12 Mineral insulation 13 Separation layer |
|---|---|

Every detail is important regarding sound insulation, because even a single sound bridge can increase the noise transmission from the waste water area to the building, that the agreed acoustic requirements can no longer be fulfilled. Sound propagation and transmission as well as the interrelationship of airborne and structure-borne sound are complex. For the planning and executing side of drainage systems, solutions are required which can be easily implemented without special knowledge in building acoustics and without that further manual work is processed. Noise insulation is particularly important in residential construction, hospitals and hotels, as the home serves as a place of rest and retreat for people. All ACO ShowerDrain shower channels are supplied with sound insulation at the factory so that the shower channels are also very easy to install from an acoustic point of view. It does not matter whether the shower channels are located in the middle of the shower area or directly at the wall. Shower channels, which are specially edged up for the wall area, are additionally

equipped with a sound decoupling layer strip, which acoustically effectively separates the shower channel from wall and tiles.

According to a judgment of the German federal court, the VDI 4100 "Noise protection in apartments" naming the the sound insulation levels SSt II and SSt III, fulfill the current requirements for apartments in single and multi-family houses as well as semi-detached and terraced houses in Germany. The tested ACO ShowerDrain fall below the required characteristic values and the increased sound insulation requirements for building services systems according to DIN 4109, partially clearly.

Acoustically tested were the ACO ShowerDrain Shower channels at the Fraunhofer Institute for Building Physics company in Stuttgart, which is certified according to EN ISO/ICE 17025 by the DAP (German Accreditation System for Testing).

Installation proposal ACO ShowerDrain Public (floor construction according sound insulation test report)

- 1 Floor tile
- 2 Tile adhesive
- 3 Compound sealing (on site)
- 4 Sealing membrane (factory assembled)
- 5 Wall tile
- 6 Offset on site
- 7 Interior wall plaster
- 8 Sound decoupling layer
- 9 mech./elec. connection joint
- 10 Filling hose
- 11 Perimeter isolation strip
- 12 Mineral insulation
- 13 Floor drain: The sound transmitting properties of the floor drain are low and not relevant for testing. Sound insulation values of the pipe must be determined separately.

The eyelet of the channel with wall flange can optionally be used as a mounting aid.

IMPORTANT: This wall fastening must be removed before installing the composite seal in order to separate the channel acoustically from the wall and tile.

The increased requirements for sound insulation must also be met in public areas. The VDI 4100 "Sound insulation in apartments" in the sound insulation levels SSt II and SSt III not only regulates the current needs for apartments, but also for hotels, clinics, hospitals, etc. or senior residences. The new ACO ShowerDrain Public 110, particularly suitable for in-line shower systems, can be combined with floor gullies Variant-CR 142 and meets all the above-mentioned sound insulation requirements as well as the increased sound insulation requirements for building services installations according to DIN 4109.

Product benefits

- minimum installation height: 69 mm
- meets requirements of all sound protection levels (SSt I-III in acc. with VDI 4100)
- free access to the pipe for optimal cleaning
- factory-welded hydro-shaped gully, guarantees permanent tightness
- removable foul air trap for optimal cleaning
- high drainage capacity

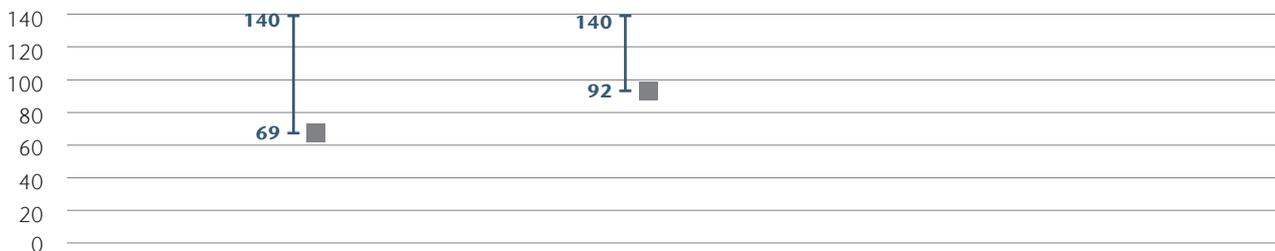

Product information

- Material: Stainless steel, material grade 304
- Load class: K3
- Internal channel width: 64 mm
- Flow rate:
 - 0,91 l/s (WS 50, with 20 mm build-up as per EN 1253-1)
 - 0,62 l/s (WS 25 with 20 mm build-up)
- Outlet socket: Suitable for all push-fit pipe socket systems
- Socket version: ND 40/ND 50

- Foul air trap: 2-part, removable
- Type of flange: surrounding flange with sealing membrane, surrounding flange, wall flange, without flange
- Channel body: Pickle passivated
- Mounting: Ready for installation
- Sound protection (as standard)
- Height adjustability: 48 respectively 74 mm using height-adjustable feet (to be ordered as an accessory)
- Grating variants: Stainless steel design gratings, tileable cover
- Supplementary components: ACO ShowerStep and ACO EasyStop

	ACO EasyStop DN 40	■ Prevents drying out of the water in the foul air trap	9010.79.23
	ACO EasyStop DN 50	■ Material: plastic with membrane and sealing lip ■ Applicable for ACO ShowerDrain C	9010.79.24

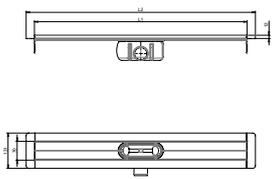

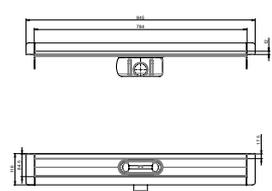

ACO ShowerDrain C Black

Product benefits

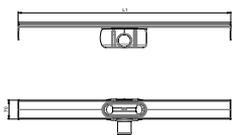

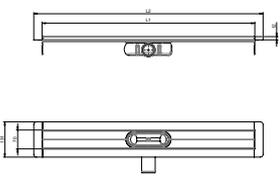

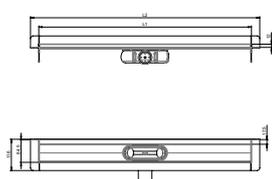

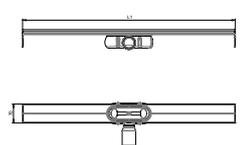

- minimum installation height: 69 mm
- meets requirements of all sound protection levels (SSt I-III in acc. with VDI 4100)
- free access to the pipeline for optimal cleaning
- factory-welded hydro-shaped gully, guarantees permanent tightness
- removable foul air trap for optimal cleaning
- high drainage capacity
- passivated flange

ACO ShowerDrain E+

Product benefits

- Option for secondary drainage
- Factory assembled sealing membrane
- Fulfills all sound insulation levels (SSSt I-III to VDI 4100)
- Superior finish due to electro-polished channel and grating
- Barrier free access to pipeline due to removable foul air trap
- Gully is welded to channel body
- Easy to handle and easy to clean

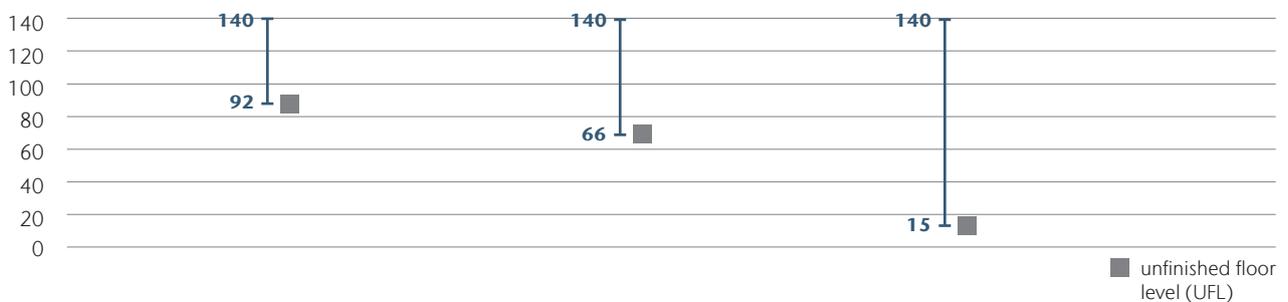

Product information

- Material: Stainless steel, material grade 304
- Load class: Meets K3 requirements
- Internal channel width: 80 mm
- Flow rate:
 - 0.4 l/s (without 10 mm build-up)
 - 0.6 l/s (with 20 mm build-up as per EN 1253-1)
 - Drain performance can be enhanced by using additional gully bodies
- Outlet socket: Suitable for all push-fit pipe socket systems
- Socket version: ND 40/ND 50
- Foul air trap: 2-part, removable

- Flange design: Factory assembled flange and sealing membrane (overlap 60 mm)
- Flange types: Surrounding, wall flange
- Channel: Electro-polished surface
- Mounting: Ready for installation
- Sound protection: Sound protection accessories integrated as standard
- Total building height:
 - 79 mm (with water seal 25 mm)
 - 105 mm (with water seal 50 mm)
- Height adjustability: 48 to 74 mm using height adjustable feet
- Grating variants: Glass, stainless steel, tileable
- Supplementary components: ACO ShowerStep, Hair strainer and ACO EasyStop

ACO ShowerDrain M+

Product benefits

- Minimum installation height: 56 mm with inclination 1.5°
- Option for secondary drainage
- Factory assembled sealing membrane
- Fulfills all sound insulation levels (SSt I-III to VDI 4100)
- Superior finish due to electro-polished channels and gratings
- Flexible for any installation situation
- Gully body can be rotated through 360°

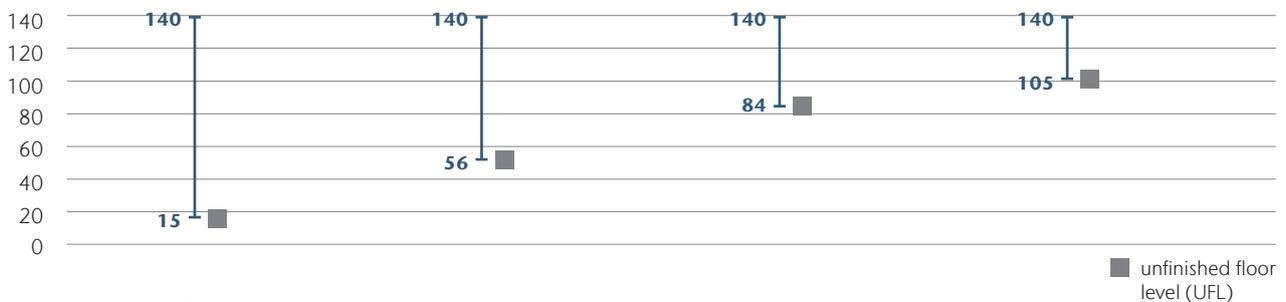

Product information

- Channel body: Stainless steel, material grade 304
- Gully body: Plastic
- Load class: K3
- Internal channel width: 80 mm
- Flow rate:
 - 0.4 l/s (with 10 mm build-up)
 - 0.46 l/s (with 20 mm build-up as per EN 1253-1)
- Outlet socket: Suitable for all push-fit pipe socket systems
- Socket version: ND 40/ND 50
- Foul air trap: One-piece with removeable submersible pipe

- Flange design: Factory assembled flange and sealing membrane (overlap 60 mm)
- Flange types: Surrounding, wall flange
- Channel: Electro-polished surface
- Mounting: Modular assembly system consisting of channel body, screwed gully body and design grating
- Scope of delivery channel: Fixing material, height adjustable feet, sound protection accessories
- Height adjustability: Max. 74 mm, depending on selected gully body
- Grating variants: Glass, stainless steel, tileable
- Supplementary components: ACO ShowerStep and Hair strainer

Individual length up to 1,990 mm on request

ACO ShowerDrain Public 80

Product benefits

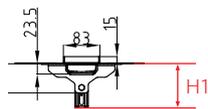

- Special length up to 3 m on request
- Minimum installation height 115 mm, inclination 1,5°
- Option for secondary drainage
- Flexible for any installation situation
- Drain body can be rotated through 360°

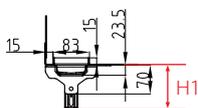

Product information

- Material:
 - Channel body: Stainless Steel, material grade 304
 - Gully body: Plastic
- Load class: K3 (DIN EN 1253-1)
- Internal channel width: 80 mm
- Flow rate (EN 1253-1):
 - 2 gullies channel length 1.500 and 2.000 mm:
 - 0,85 l/s with 10 mm build up
 - 0,95 l/s with 20 mm build up
 - 3 gullies channel length 2.500 and 3.000 mm
 - 1,15 l/s with 10 mm build up
 - 1,30 l/s with 20 mm build up
- Outlet socket: Suitable for all push-fit pipe socket systems
- Socket version: ND 40/ ND 50
- Foul air trap: One-piece with removeable submersible pipe
- Flange design: Factory assembled flange and sealing membrane (overlap 60 mm)
- Flange type: Surrounding, wall flange
- Channel: Pickle passivated surface
- Mounting: Modular assembly system consisting of channel body, screwed gully body and design grating
- Scope of delivery channel: Fixing material, height adjustable feet, sound protection accessories
- Installation height UFL: 30 - 140 mm
Height adjustability: 25 mm (adjusting feet)
- Supplementary components: ACO ShowerStep and hair strainer

Product benefits

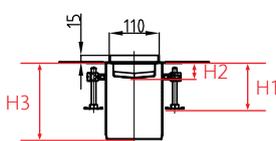

- Special length up to 5 m on request
- Combination with fire protection floor drain possible (page 26/27)
- Option for secondary drainage
- Continuously height-adjustable
- Floor drain optionally made of stainless steel or cast iron

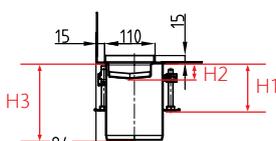

Product information

- Material:
 - Channel body: Stainless Steel, material grade 304
 - Gully body: optionally made of stainless steel or cast iron
- Load class: K3 (DIN EN 1253-1)
- Internal channel width: 107 mm
- Flow rate: up to 2l/s, depending on gully
- Socket inclination: 90 °, Ø 125 mm; suitable for floor drains ACO Variant-CR 142 made from stainless steel and ACO Passavant made from cast iron
- Foul air trap: one-piece, removeable, depending on floor drain
- Flange design: Factory assembled flange and sealing membrane (overlap 60 mm)
- Flange type: Surrounding, wall flange
- Channel: Pickle passivated surface
- Mounting: Modular assembly system consisting of channel body, floor drain and design grating
- Scope of delivery channel: Combined sealing ring for floor drain ACO Variant-Cr 142, height adjustable feet
- Installation height UFL:
 - Channel 1.500 / 2.000 from 60 mm up to max. 130 mm
 - Channel 2.500 / 3.000 from 65 mm up to max. 135 mm
- Supplementary components: ACO ShowerStep

ACO ShowerDrain S

Product benefits

- Minimum installation height: 55 mm, unfinished floor level
- Meets requirements of all sound protection levels (SSt I-III in acc. with VDI 4100)
- Removable submersible pipe in foul air trap for optimum cleaning
- Standard length 1500 mm: meets requirements of DIN 18040 (barrier-free construction)
- Visible width of just 34 mm

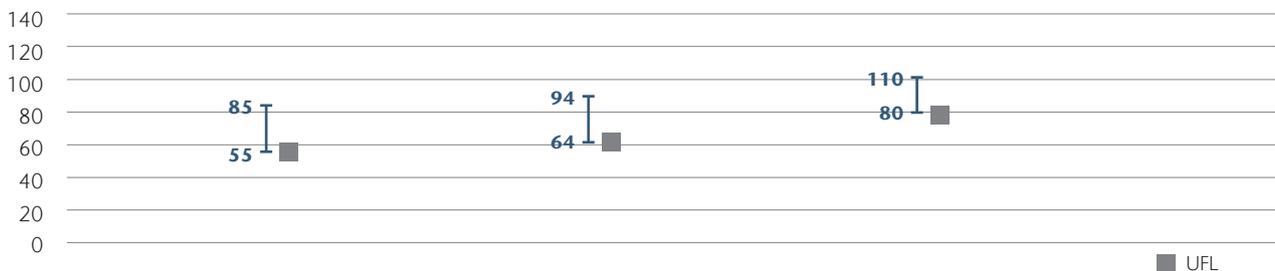

Product information

- Material: Stainless steel, material grade 304
- Load class: K3
- Internal channel width: 34 mm
- Flow rate:
 - 0.5 l/s without 10 mm build-up (ND 50/ND 40)
 - 0.8 l/s with 20 mm build-up (ND 50 as per EN 1253-1)
 - 0.65 l/s with 20 mm build-up (ND 40 as per EN 1253-1)
 - 0.35 l/s without 10 mm build-up (ND 32)
 - 0.55 l/s with 20 mm build-up (ND 32 as per EN 1253-1)
- Outlet socket: Suitable for all push-fit pipe socket systems
- Flange design: Factory assembled flange and coating, for optimum connection of a compound seal
- Type of flange: Surrounding
- Channel: Electro-polished surface
- Adaptation to tile thickness: Heights adjustable plastic feet, from 11 – 22 mm
- Number of gully bodies:
 - 1 up to a length of 900 mm
 - 2 for lengths of 1000 mm or more
- Mounting: Ready for installation
- Sound protection: Sound protection accessories integrated as standard
- Height adjustability: 30 mm using height-adjustable feet
- Supplementary components: ACO ShowerStep, Hair strainer

ACO ShowerDrain B

Product benefits

- Minimum building height: 77 mm, unfinished floor level
- Smooth surface for optimal cleaning
- Full access to pipeline for optimum cleaning
- Stainless steel channel with screwed plastic gully, no risk of leakage
- 2 in 1 spigot with ND 40 and ND 50

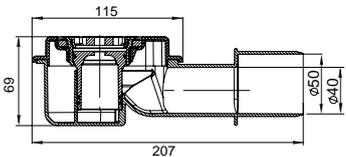

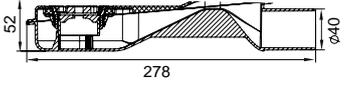

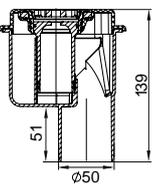

Product information

- Material:
 - Channel body: Stainless steel
 - Gully body: Plastic
- Load class: K3
- Internal channel width: 64 mm
- Flow rate:
 - 0.4l/s (with 10 mm build-up)
 - 0.46l/s (with 20 mm build-up as per EN 1253-1)
- Outlet socket: Suitable for all push-fit pipe socket systems
- Socket version: ND 40/50
- Foul air trap: 1-piece with removable submersible pipe
- Flange design: Permanently cast-on, for optimum connection of a compound seal
- Type of flange: Surrounding
- Mounting: Ready for installation
- Total installation height:
 - 89 mm (with water seal 30 mm)
- Channel: Pickle passivated
- Grating: Grinded
- Grating variant: Design Slot included in scope of delivery
- Supplementary components: ACO ShowerStep and different gully bodies

Product overview

ShowerFloor

ACO ShowerFloor
for line drainage

56

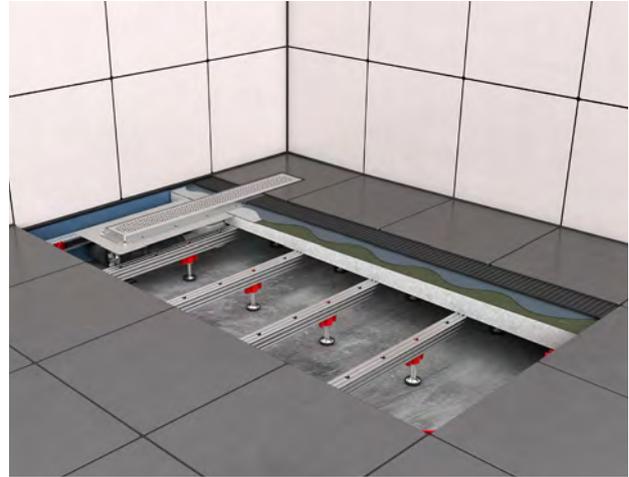

ACO ShowerFloor
for point drainage

58

ACO ShowerFloor for line drainage

Product benefits

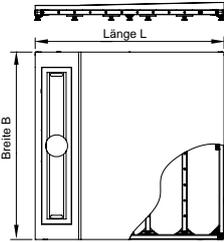

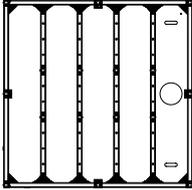

- Meets requirements of all sound protection levels (SSt I-III in acc. with VDI 4100)
- tileable directly after installation
- time for a change of crafts and screed drying is saved
- flexible adaptation to the Cutout
- simple and quick height adjustment from above
- shower board with integrated gradient

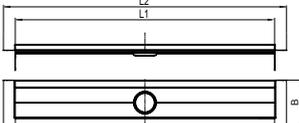

Product information

- Components:
 - galvanised steel profiles
 - glass fibre reinforced connectors
 - polystyrene shower board with mineral surface according to DIN 18534-1 and integrated slope
- Mounting: pre-assembled system
- Shower channel: surface electro-polished
- Height adjustable from 115 mm up to 275 mm (with height adjustable feet 9010.68.09)
- Load class: K3
- Delivery scope:
 - mounting system with connecting elements
 - shower board
 - height adjustment feet and mounting aid
 - sound decoupling pads
- Supplementary components: ACO ShowerStep

Point drainage

ACO sanitary gullies MG

62

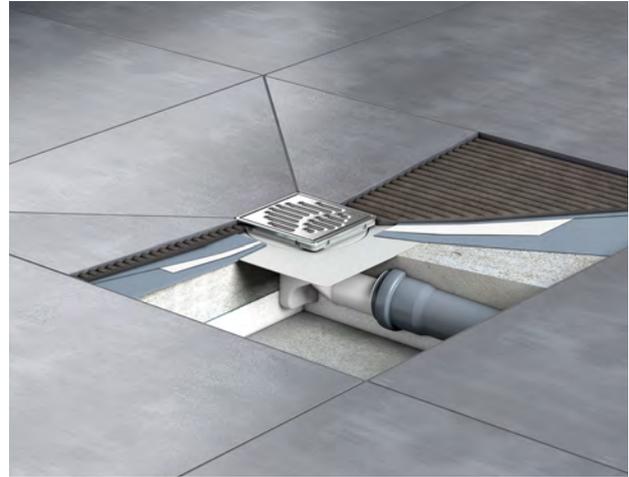

ACO sanitary gullies Easyflow

65

ACO sanitary gullies MG

Product benefits

- Fulfills the requirements of EN 1253-1
- Minimum installation height
- Flange for connecting the composite seal
 - 50 mm
 - Eroded
- Optimum pipe cleaning access
- Complete system

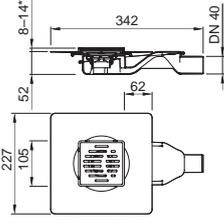

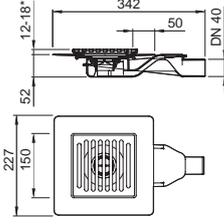

Product information

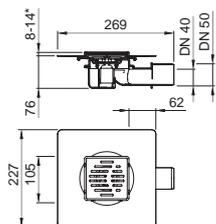

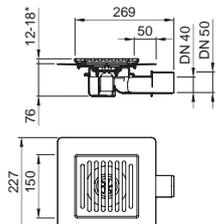

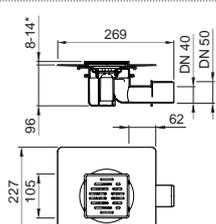

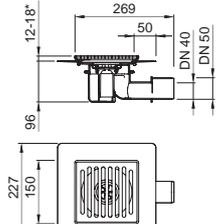

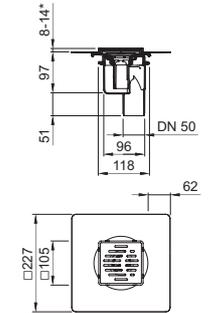

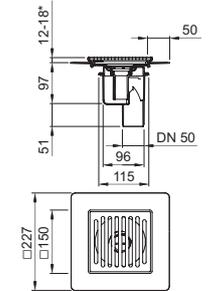

- Material: Plastic (Gully), Stainless steel (Frame und Grating)
- Load class: K3
- Flow rate:
 - 0.4 l/s (with 10 mm build-up)
 - 0.46 l/s (with 20 mm build-up s per EN 1253-1)

- Foul air trap: one-piece with removable submersible pipe
- Suitable for: Tile thickness min. 6 mm
- Mounting: ready for installation
- Flange: with surrounding sealing flange 50 mm
- Outlet socket: suitable for all push-fit pipe socket systems

ACO Fit-in

ACO sanitary gullies Easyflow

Product benefits

- Meet requirements of EN 1253-1
- Range designed for different tile thicknesses and floor structure heights
- Height-adjustable top sections
- Incl. installation cover
- Optimum pipeline access after removal of foul air trap
- Retrofittable fire protection AbZ: Z-19.17-2159 (German certificate)

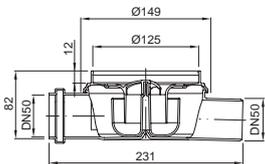

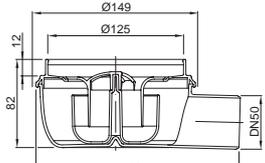

Product information

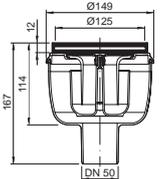

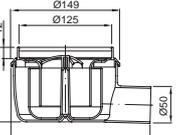

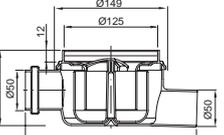

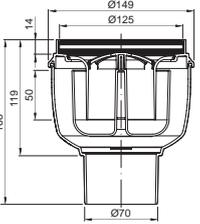

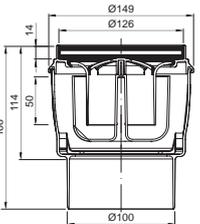

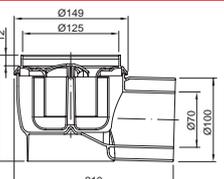

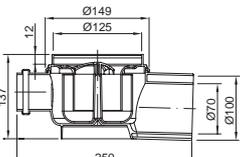

- Material: Plastic
- Outlet socket: Suitable for all push-fit pipe socket systems
- Flow rates:
 - ND 50 = 1.0 l/s (20 mm build-up as per DIN EN 1253-1)
 - ND 70 = 1.6 l/s (20 mm build-up as per DIN EN 1253-1)
 - ND 100 = 1.6 l/s (20 mm build-up as per DIN EN 1253-1)
- Foul air trap: Removable

- Gully body flange type: Clamping flange which can be retrofitted as an option
- Mounting: Ready for installation
- Grating variants:
 - Stainless steel (round or square)
 - Tileable
 - Glass
- Retrofittable upgrades:
 - Fire protection
 - Dry foul air trap
